

Reach Beyond NGOSS with Infogix Controls™

## Eliminate Errors in Your Operations Support Systems

It's a new era in communications. Today, you must work with other technology, communications, entertainment, and business entities to meet the needs of your customers. Competitive pressures also require you to streamline your processing to offer "non-traditional" communications bundles – and to assure that the information you use to run your business is accurate, consistent, and reliable.

Your Next Generation Operations Support Systems (NGOSS) need to process an ever more complex, fast-paced, and voluminous amounts of information.

You need automated information controls so you can:

- Reduce operational costs.
- Ensure the accuracy of ordering, billing, and provisioning.
- Increase customer satisfaction.
- Increase confidence in revenue booking and reporting.

Leading companies know they must move beyond manual controls to speed service delivery, increase efficiency, and achieve compliance. That's why so many are now using Infogix Controls to assure that their key business processes and information are accurate and timely.

### Automated Controls from Infogix

Infogix is the leading provider of solutions that manage the integrity of transactions across complex processes and systems environments. For over 25 years, our independent automated information controls have helped hundreds of companies eliminate information errors in their critical business systems.

Infogix Controls allow you to span both legacy and new platforms to provide the visibility that you need to create confidence in your fulfillment, accounting, billing, and other processes.

### Infogix Controls Benefits

- Increase the confidence you have in your critical business information.
- Reduce operational costs.
- Single standardized control solution for both your new and legacy OSS/BSS.
- Ensure accurate ordering, billing, and revenue reporting processes.
- Leverage legacy systems and infrastructure, while integrating new technologies.
- Ensure financial transaction accuracy and reporting.
- Streamline compliance.

*Leading telecommunications companies implement Infogix Controls to independently automate controls in their information intensive finance and operational processes.*

## Eliminate Errors in Your Operations Support Systems

Take control of your fulfillment, accounting, and billing processes with proven solutions from Infogix. We provide independent automated controls, automated reconciliation, and real time visibility you need to assure that all of your processes function in a proper and efficient manner.

### Independent Controls Platform

- Apply controls across all of your processes, systems, and platforms.
- Provide visibility for decision makers to accelerate problem solving.
- Non-intrusive implementation uses data in its existing format.

### Automated Reconciliation

- Reconcile all of the control points in your service fulfillment, accounting, and billing processes, within each system and end-to-end across all of them.
- Automate controls in and across both legacy and new systems.
- Eliminate costly and problematic manual controls.
- Reduce audit time and cost.
- Streamline control baselines, walk-throughs and testing.

### Real Time Process Visibility

- Track order or customer changes from creation, to delivery, to revenue booking.
- Manage and resolve control failures.
- Provide more timely and accurate revenue assurance.
- View detailed revenue streams through your controls on a daily basis.

- Enable better control visibility across processes, applications, and platforms.

### Proper and Efficient Process Completion

- Ensure that all of your processing and required controls take place in a proper and efficient manner.
- Increase the accuracy of information in legacy systems such as CRIS, LFACS, and TIRKS.
